Tools, services and support for contractors.

Partnering in the evolution of building.

The color PURPLE® is a registered trademark of National Gypsum Properties, LLC.
Your single source for a complete portfolio of products, including:
• Gold Bond® gypsum board, including the PURPLE® XP family of drywall products.
• eXP® fiberglass-faced interior and exterior gypsum panels.
• PermaBase® cement board products.
• ProForm® gypsum finishing products.
• DEXcell®, a new family of high-performance roof boards for commercial roofing systems.

Proprietary research and development set us apart.
• National Gypsum’s Technology Innovation Center.
  • Dedicated laboratories for fire and acoustical testing.
• Advanced engineering and the latest technical advancements in building science keep our partners at the forefront of industry trends.

Technical resources at your fingertips.
• Online library of high-quality Building Information Modeling (BIM) objects and Computer Aided Design (CAD) files.
• Web-based tools for evaluating technical product information, including submittal pages, guide specification and ordering information.
• Green Product Expert® online resource used to assess LEED credits capabilities for regional materials and recycled content.
• Field application guides, like The Construction Guide, The PURPLE Book™ and The SoundBook™, for contractor references.

We’re not just a product manufacturer, we’re a building partner.
• Strategic nationwide network of manufacturing facilities allows us to provide the best in customer service.
• National network of highly trained professionals can assist you with your plans and troubleshoot problems immediately.
• Call 1-800-NATIONAL® to talk directly to a technical expert with up-to-date knowledge of specifications, building codes, product information and much more.

Build with the environment in mind.
• National Gypsum empowers the highest level of ecological responsibility and resource-efficient technology.
• Offering products manufactured to achieve GREENGUARD Certification, the most stringent standard for indoor air quality in the United States.
• A portion of our gypsum board is made from a process used to remove sulfur dioxide from emissions at coal-fired power plants.
• 100% of our paper face is made from post-consumer recyclable content.

We help you meet the demands for green programs and credits such as USGBC LEED 2009 and LEED v4.
• State-of-the-art Technology Innovation Center.
• Dedicated laboratories for fire and acoustical testing.
• Superior engineering and the latest technical advancements in building science keep our partners at the forefront of industry trends.
