**Gold Bond® BRAND eXP® Sheathing** consists of a moisture- and mold-resistant gypsum core encased in a coated, specially designed PURPLE® fiberglass mat on the face, back and sides. It is available in either a Regular or Type X core. The glass mat is folded around the long edges to reinforce and protect the core, and it provides superior weather resistance.

Use it for attachment to the outside of wall and soffit framing as a substrate for exterior cladding. It is available with either a Regular or Type X core.

For speed of installation, GridMarX® guide marks are printed on the glass mat surface.

**Sizes:** 1/2 in. (12.7 mm) thick Regular and 5/8 in. (15.9 mm) thick eXP® Fire-Shield® Type X Panels are available in 4 ft. (1,219 mm) widths and in standard lengths of 8 ft. (2,438 mm) to 10 ft. (3,048 mm).
Basic Uses

APPLICATIONS

- Use it as a sheathing on wood or steel framing to provide fire resistance and weather protection when used under exterior claddings, such as wood, vinyl and fiber cement siding, masonry veneer, Exterior Insulation and Finish Systems (EIFS) and stucco.

- Use it as a sheathing in fire-resistance-rated exterior wall assemblies and/or for soffit framing.

ADVANTAGES

- Manufactured to meet ASTM C1177 (Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing).

- Fire-resistant material with a non-combustible gypsum core helps protect framing elements, even when cladding is combustible.

- Does not require taping of joints when used in fire-rated exterior wall assemblies.

- Resists the growth of mold per ASTM D3273 with a score of 10, the best possible score.

- Provides superior water resistance without impeding vapor transmission.

- Scores and snaps to exact size without sawing.

- Dimensionally stable under changes in temperature and relative humidity and resists warping, rippling, buckling and sagging.

- Ideally suited for soffit applications and radius applications.

- Offers a 12-month extended exposure warranty for typical weather conditions. Refer to National Gypsum Company limited warranties for further details.

- Coated fiberglass facers for easy handling.

- Features the GridMarX® guide marks on the panel to allow for faster and accurate installation.

Installation Recommendations

GENERAL

FASTENING

Nails: Galvanized, 11-gauge, 7/16 in. (11.1 mm) head, 1-1/2 in. (38.1 mm) long for 1/2 in. (12.7 mm) sheathing and 1-3/4 in. (44.5 mm) long for 5/8 in. (15.9 mm) sheathing.

Screws: ASTM C1002 or ASTM C954, 1-1/4 in. (31.8 mm) long Type W for wood framing and 1 in. (25.4 mm) long Type S-12 for metal framing.

Staples: Galvanized 16-gauge, 7/16 in. (11.1 mm) crown, 1-1/2 in. (38.1 mm) long for 1/2 in. (12.7 mm) sheathing and 1-5/8 in. (41.3 mm) long for 5/8 in. (15.9 mm) sheathing.

All fasteners used to attach the sheathing to structural framing must be driven so that the heads are at, or slightly below, the surface of the sheathing without fracturing the core. Staples should be driven with the crown parallel to the framing. Fasteners should be no less than 3/8 in. (9.5 mm) from the edges and ends of the panel. When shear values are not required, fasteners should be spaced not more than 8 in. (203 mm) o.c. along the vertical ends or edges and intermediate supports.

SHEATHING

EXP Sheathing may be attached parallel to or perpendicular to wood or metal framing. For horizontal applications, install EXP Sheathing with end joints staggered.

Use appropriate panel orientation for specific fire assemblies and shear wall applications, as required by the design.

Install EXP Sheathing with vertical edges butting over the center of framing members. Fit sheathing snugly around all openings.

Install panels with a 3/8 in. (9.5 mm) gap where non-load-bearing construction abuts structural elements.

To prevent wicking, install panels with a 1/4 in. (6.4 mm) gap where they abut masonry or similar materials that might retain moisture.

---

1. Specified minimum values per ASTM C1177, tested in accordance with ASTM C473.
2. Tested in accordance with ASTM C1177.
3. Tested in accordance with ASTM E84.
4. Please consult your local sales representative for all non-standard lengths and widths. Minimum order requirements may apply.
5. Tested in accordance with ASTM C518.
6. Tested in accordance with ASTM E84.
7. Tested in accordance with ASTM E72.
8. Tested in accordance with ASTM D3273.
Shear Walls: Where wind or seismic forces require shear walls to resist these lateral forces, most building codes provide allowable shear values for walls having gypsum sheathing applied vertically to wood framing. Specific values with construction requirements and limitations are contained in the model building code (ICC: International Building Code [IBC] and International Residential Code for One- and Two-Family Dwellings [IRC]). Shear values for all gypsum panels, including gypsum sheathing, are defined in GA-229-08, Shear Values for Screw Application of Gypsum Board on Walls.

SAFETY

Installers should wear long pants and a long-sleeved, loose fitting shirt. Use protective gloves and special eye protection (goggles or safety glasses with side shield). Wear a dust mask when sanding; you may need additional breathing protection in extremely dusty conditions. Do not use a power saw to cut this product.

Caution: Because this product contains fiberglass, dust and glass fibers may be released during normal handling, which could result in eye or skin irritation or cause difficulty in breathing. Whenever possible, avoid contact with the skin and eyes and avoid breathing dust or fibers that may be released during installation. Consult the SDS for this product, available at purplechoice.info before use.

Limitations

- EXP Sheathing is not a finished surface, nor is it a substrate for the direct application of joint compound, stucco, paint or textures in exterior wall applications. Placement of vapor retarders within the wall assembly is the responsibility of the design professional.
- Do not use EXP Sheathing as a nailing base. Mechanical fasteners should pass through the sheathing and engage the framing member behind the panel.
- Install materials used in conjunction with EXP Sheathing per the respective manufacturer’s recommendations.
- EXP Sheathing is resistant to weather, but it is not intended for immersion in water and should not be subjected to ponding or to cascading water conditions.
- Do not apply EXP Sheathing below grade. Comply with building code grade clearance requirements.
Common eXP® Sheathing Exterior Applications

**EIFS**
1. eXP® Sheathing
2. Screed Flashing
3. Weather Resistant Barrier
4. Insulation
5. Weep Screed
6. Mesh
7. Basecoat
8. Stucco Finish Coat

**STUCCO**
1. eXP® Sheathing
2. Screed Flashing
3. Weather Resistant Barrier
4. Metal Lath
5. Scratch Coat
6. Weep Screed
7. Brown Coat
8. Primer
9. Stucco Finish Coat

**BRICK VENEER**
1. eXP® Sheathing
2. Base Flashing
3. Weather Resistant Barrier
4. Veneer Tie
5. Brick Veneer

**THIN STONE VENEER**
1. eXP® Sheathing
2. Weep Screed
3. Base Flashing
4. Weather Resistant Barrier
5. Insulation
6. Cement Board
7. Basecoat
8. Thin Stone Veneer
Do not laminate eXP Sheathing directly to masonry surfaces; fasten panels to furring strips or framing.

eXP Sheathing is not intended for tile applications. For tile applications, Gold Bond® brand eXP® Tile Backer or PermaBase® brand Cement Board is recommended.

Gypsum sheathing is not a replacement for specific structurally engineered sheathing in shear wall designs.

Adhesive-only application of eXP® Sheathing to framing is not recommended.

Framing supports must not exceed 24 in. (610 mm) o.c.

Design details, including fasteners, sealants and control joints, must be properly installed per system specifications. Openings and penetrations must be properly flashed and sealed according to code, building design and weather resistant barrier manufacturer’s instructions. Failure to do so will void the warranty; refer to eXP Sheathing warranty for terms, conditions and limitations.
